MEET THE ROCKPORT WORKS SAILING CLUB RK6734 FEATURING PORON® XRD®—AN INTERNAL MET GUARD MATERIAL THAT'S SOFT TO THE TOUCH, YET TOUGH ON IMPACT.

IT'S DIFFERENT. HERE'S HOW IT WORKS:

A lightweight, thin and breathable met guard material that's engineered for repeated impact and shock absorption. Soft, flexible and comfortable during normal wear, it instantly firms to form a protective shell that shields the instep from impact (Like water instantly freezing into ice.) It instantly dissipates force, absorbing up to 90% of energy.

SAFETY FEATURES

ASTM F2413

The official standard for safety toe protective footwear in the United States.

ALLOY TOE

A protective toe cap with a specialized blend of metals to minimize weight and maximize protection. Meets or exceeds the ASTM F2413 standard for protective footwear.

COMPOSITE TOE

A non-metallic rigid polymer protective toe cap, which is light weight and will not conduct heat, cold or electricity. Meets or exceeds the ASTM F2413 standard for protective footwear.

XTR® BRAND COMPOSITE TOE CAP

Provides extra toe room and comfort; is lightweight, strong as steel and will not conduct heat, cold or electricity. The XTR® Brand composite toe cap meets or exceeds the ASTM F2413 standard for protective footwear.

STEEL TOE

Non-corrosive protective toe cap. Meets or exceeds the ASTM F2413 standard for protective footwear.

STATIC DISSIPATIVE SD 10 WITH DUAL RESISTOR

Static Dissipative footwear dissipates static electricity from the wearer's body into the walking surface to prevent static electricity build-up. It also provides some electrical resistance and offers limited protection to the wearer against electrical shock. Dual Resistor SD is a Warson Brands patented technology (US Patent 6,421,222) that precisely and reliably provides 1 to 10 megohms of electrical resistance, ensuring that the footwear meets the SD 10 standard. These shoes are to be used in areas where the generation of static electricity could harm electrical equipment, circuit board assembly, the manufacture of computer chips, or paint application processes.

STATIC DISSIPATIVE SD 35

ESD Footwear is designed to dissipate static electricity from the wearer's body into the walking surface to prevent static electricity build up. These shoes meet or exceed the ASTM F2413 SD35 standard and provide an electrical resistance of 1 to 35 megohms (3.5 x 10⁷ ohms). These shoes are to be used in areas where the generation of static electricity could harm electrical equipment, circuit board assembly, the manufacture of computer chips or paint application processes.

ELECTRICAL HAZARD

EH footwear provides a source of protection to the wearer from electrical shock in environments where the wearer may accidentally step on a live wire or charged electrical equipment.

METATARSAL GUARD

A reinforced layer in the metatarsal portion of the footwear that protects the metatarsal bones by deflecting falling objects and absorbing impact energy. Traditionally used in areas where there is a higher risk of objects falling or rolling onto the metatarsal area of the worker's foot. Meets or exceeds the ASTM F2413 standard for metatarsal protective footwear.

SLIP RESISTANT

Soles designed to provide a high coefficient of friction with the walking surface to improve slip resistance. Meets F3445 Standard.

HYDRO-SHIELD® WATERPROOF

Rockport Works Hydro-Shield® is a waterproof, breathable technology that protects your feet from harsh weather without sacrificing comfort. In addition to waterproof leather it consists of seam sealing and a waterproof insole board to help prevent the penetration of water. For industrial applications, Hydro-Shield™ protection is guaranteed as Water Resistant protection.

METAL FREE

Footwear that contains zero metal. 100% metal free. It is ideal for jobs that require working around sensitive metal detectors.

RATINGS GUIDE

SLIP

Indicates passage of ASTM F3445 standard, which tests the outsole on dry/wet quarry tile.

OIL

Indicates slip resistance of outsole in the presence of oily conditions, specifically kitchen environments.

METAL CHIPS

Indicates the shoe's protection of the bottom of the foot from penetration by metal chips.

HEAT

Indicates heat resistance of the outsole to a hot contact, showcasing resistance against outsole melting and deformation.

ABRASION

Indicates outsole durability and ability to continue to protect over time and against tough terrain.

CHEMICALS

Indicates whole shoe durability and cleanability against a variety of common industrial chemicals.
